Navigation Information

Type: Breadcrumbs
Breadcrumbs are used to provide the visitor with the ability to instantly see their location within the site hierarchy. If links are enabled, the user can click any of the sections forming the path between the site root and current section. Start & Finish Level can also be specified.

Notes

1. Go to **Assets** and select **Navigation**.
2. Click **Create New** in the relevant group.
3. Fill in the details as shown above.
4. Click **Add** to save.
5. Go to **Assets** and select **Styles**.
6. Select the **T4 Tag** tab.
7. Build a navigation tag for the new breadcrumbs.
8. Copy the code and select the **Header** tab.
9. Replace the breadcrumbs with the T4 Tag.
10. Update your style and preview from the Site Structure. The breadcrumbs are now generated.
