

CSS Images

To Do

1. If you use images in your CSS, ensure you add them to the Media Library.
2. Add the images to a piece of content and publish.
3. View the source to capture the image references.
4. Update the CSS with the image references.

```
/* Header */  
#headerwrap {background: #336699  
url('/media/sampledatab/styleassets/images/menubg.png')}
```

Notes

1. Create a category in the Media Library for the CSS images.
2. Upload the images.
3. Create a hidden section in the Site Structure to contain the images.
4. Use the images in a piece of content in the new section.
5. Approve and publish the content.
6. View the source and make a note of the image references.
7. Update the CSS file to use the image references.
8. Publish your site to see the style updated with all the images.
